

Science Sketches

Make quick drawings or sketches to help you learn each of these words and their meanings.

energy: what we use in the world to create heat, light, movement, and power for our bodies, homes, and communities

electricity: the kind of energy we use to power things in our homes like our lights, TVs, computers, and refrigerators

solar energy: renewable energy generated or made from the light and heat from the sun

solar farm: a group of solar panels that capture energy from the sun for delivery to communities near or far

renewable energy: Energy that can be generated or made without running out or making pollution — renewable energy is sometimes called clean energy or green energy. Some examples include solar energy, wind energy, and energy made from the movement of water.
