THE INTERCONNECTION PROCESS

The Interconnection Process

Today, you have more options than ever for renewable energy. We will work with you to ensure your renewable energy system is safely connected to our smart grid. (You may have heard this connection process referred to as “Interconnection.”)

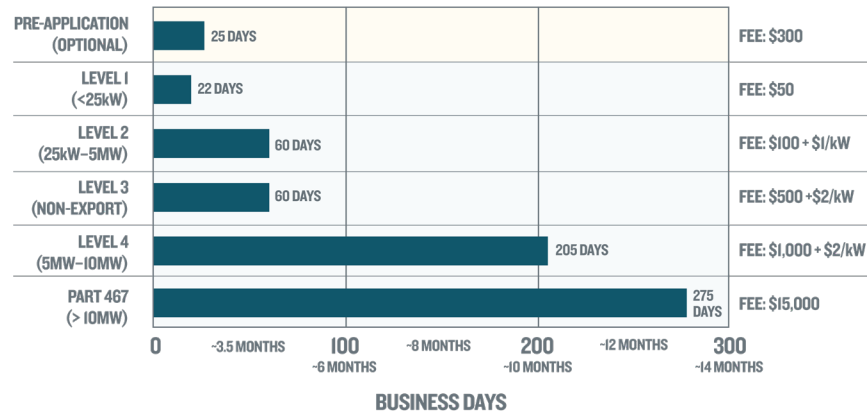

* Completing these two optional steps may provide insight into the feasibility of the project.
 ** Numbers and types of technical reviews may vary by interconnection level.

HOW LONG IS THE INTERCONNECTION PROCESS?

Interconnection applications and processing times are classified by the size and type of renewable energy system being installed per Illinois Administrative Code Part 466 and Part 467. The time to review and approve applications varies by level of interconnection as seen in the chart to the right.

INTERCONNECTION PROCESS DURATION AND FEES***

***Amounts listed are base fees, additional fees may apply.
