Commit to Operational Savings: Spend More, Save More

SOLUTION SPOTLIGHT
8-floor office building

$72,113 annual cost savings

- Spending commitment: $30,000 (actual: $36,060)
- Energy savings target: 1,000,000 kWh (actual: 1,260,891 kWh)
- 6-month payback

The ComEd Energy Efficiency Program Retro-Commissioning and Retro-Commissioning Express offerings have energy savings targets and spending commitments to set expectations upfront—so you know what to plan for.

An energy savings target is the reasonable amount of annual energy savings that is achievable based on a preliminary screening of your building. To achieve your energy savings target, implement your choice of recommended energy conservation measures (ECMs), which focus on paybacks of 18 months or less.

A spending commitment is set to ensure you will achieve cost-effective energy savings through the program you selected. We recommend preparing your budget to meet or exceed this amount.

If you exceed your energy savings target and spending commitment, while also implementing ECMs on time, you can receive a bonus incentive of $0.07/verified kWh saved.

Participants spend an average of 150 percent of their spending commitment because, in many cases, enough ECMs with great paybacks are identified to make the additional investment worthwhile.
